## **DETAILED ACTION**

## Allowable Subject Matter

Claims 1, 4-9 and 13 are allowed over prior art.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 4-9 and 13, the prior art fails to teach an electro-optical detection system having an outer window and an inner window with intervening space between the windows, wherein only the inner surface, facing away from outer window side, of the inner window is coated with an optical coating which is substantially transparent in at least one of visible wavelength bands and infrared wavelength bands and is substantially opaque to an electromagnetic radiation for radio and radar frequencies as claimed in independent claims 1 and 8.

Claims 4-7, 9 and 13 are allowed by virtue of their dependency.

Regarding claims 15 and 21-23, the prior art fails to teach a method of detecting, from within a platform moving at a supersonic speed, electromagnetic radiation in at least one wavelength band selected from a group consisting of visible wavelength bands and infrared wavelength bands by providing an inner window, and thermally insulating the inner window with an outer window, wherein only the inner surface, facing away from outer window side, of the inner window is coated with an optical coating which is substantially transparent in the waveband and is substantially opaque to an electromagnetic radiation for radio and radar frequencies as claimed in independent claim 15.

Claims 21-23 are allowed by virtue of their dependency.

Art Unit: 2882

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Clark (US 5147694) teaches electromagnetic shielding panel having two windows and an intervening space in between but fail to teach the panel is used with an electro optical payload, a mobile platform nor a platform moving at a supersonic speed and one having ordinary skill in the art would not change the optical coating to be located at the inner surface of inner window because the coating would be less protective than outer surface of the inner panel.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoon Song whose telephone number is (571) 272-2494. The examiner can normally be reached on 8:30 AM - 5 PM, Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Glick can be reached on (571) 272 - 2490. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
